Cancer Registration toward National Cancer Control Programme

Noncommunicable Diseases and Health Promotion
Dr Hai-Rim Shin

World Health Organization
Western Pacific Region
National Cancer Control Program
: a systemic and comprehensive approach

The cancer registry is an essential part of cancer control program
3. Prevention and control of NCD services in primary care and community settings

- Lifestyle risk factor interventions e.g. Smoking Cessation Clinics (2005); Weight Management Clinic (KCHS) (2005)
- Screening – opportunistic and programme-based; occupational health fitness assessment; Well Women’s Clinics; Cervical Cancer Screening Programme (2011), Health Screening for NCDs (2013)
- Diagnosis and management of NCDs and risk factors including hypertension, diabetes, hypercholesterolemia and COPD
- Management of NCD complications including diabetic retinopathy through Community Ophthalmology Clinics
- Counselling and patient education on NCDs & risk factors – asthma and diabetic nurse educators and dietitians

5. NCD surveillance

- NCD risk factor surveys i.e. National Nutritional Status Survey (NNSS), 2nd National Health and Nutritional Status Survey (NHANSS)
- Mortality and morbidity indicators
- Birth and Death Registries
- National Cancer Registry
- Pap Smear Registry
- Other Chronic Diseases Registry e.g., diabetes (hospital-based)

<tr>
<th>Strategic themes</th>
<th>National targets to be achieved by 2018 (with baseline value of 2010)</th>
</tr>
</thead>
<tbody>
<tr>
<td><strong>Improving Health Through Enabling Environment and Healthy Choices</strong></td>
<td></td>
</tr>
<tr>
<td>Objective 1: To reduce tobacco use</td>
<td>• A 30% relative reduction in prevalence of current tobacco use in persons aged 15+ years</td>
</tr>
<tr>
<td>Objective 2: To promote balanced and healthy diet</td>
<td>• A 10% relative reduction in mean population intake of salt/sodium and prevalence of hypertension</td>
</tr>
<tr>
<td>Objective 3: To increase physical activity</td>
<td>• Reduction in the rate of increase of obesity and diabetes to 1%</td>
</tr>
<tr>
<td></td>
<td>• All school canteen operators stop selling sugar-sweetened beverages containing 6 grams or more added sugar per 100mls**</td>
</tr>
<tr>
<td></td>
<td>• 50% reduction on ‘regular’ consumption of sweetened drinks by children</td>
</tr>
<tr>
<td></td>
<td>• 50% of all workplaces having established healthy workplace programs to promote a healthy lifestyle</td>
</tr>
<tr>
<td></td>
<td>• A 10% relative reduction in prevalence of insufficient physical activity</td>
</tr>
<tr>
<td><strong>Improving Health Through Enhancing the Continuum of Care for NCDs</strong></td>
<td></td>
</tr>
<tr>
<td>Objective 4: To identify people at risk for NCDs and manage effectively</td>
<td>• 50% of eligible people* receive drug therapy and counselling (including glycemic control) to prevent heart attack and stroke</td>
</tr>
<tr>
<td>Objective 5: To improve the quality of care and outcome of NCDs management</td>
<td>• An 80% availability of the affordable basic technologies and essential medicines, including generics, required to treat major noncommunicable diseases in both public and private facilities</td>
</tr>
<tr>
<td></td>
<td>• 10% reduction in CVD, cancer and DM mortality in hospitals, other health centres and clinics.</td>
</tr>
</tbody>
</table>
Objective 4: To Identify People at Risk of NCDs and Manage Effectively

RECOMMENDED ACTIONS FOR MINISTRY OF HEALTH

5. To strengthen cancer screening programme for cancers of the uterine cervix, colorectum and breast:
   - To develop guidelines and SOPs and to ensure that adequate infrastructure and human resources are available for cervical cancer screening to be available in all health centres; and colorectum and breast cancer in all hospitals.

Objective 5: To Improve the Quality of Care and Outcome of NCD Management

RECOMMENDED ACTIONS FOR MINISTRY OF HEALTH

4. To enhance and improve cancer management through provision of adequately-trained human resources, early detection programmes, patient support systems for compliance to treatment and follow up and cancer registration.
C. MONITORING FRAMEWORK

Goal: 18% Relative Reduction in Premature Mortality from NCDs by 2018 (“18 by 18”)

Data sources: National NCD Risk Factor Survey (STEPS), Global School-based Health Survey (GSHS), Global Youth Tobacco Survey (GYTS), Civil Registration, Cancer and Other NCD Registries and NCD Hospital-based Mortality Registry.

<th>Short-term outcomes</th>
<th>Intermediate outcomes</th>
<th>Long term outcomes</th>
</tr>
</thead>
<tbody>
<tr>
<td>4. To identify people at risk for NCDs and manage effectively</td>
<td>• Screening</td>
<td>• Increased awareness amongst population of the risk factors associated with NCDs • Increased awareness amongst population that it is possible to reduce personal risk of NCDs by practicing healthy lifestyle and adhering to therapy</td>
<td>• 50% of eligible people receive drug therapy and counselling (including glycemic control) to prevent heart attack and stroke</td>
<td>• 10% relative reduction in risk of premature mortality from CVD, cancer and DM</td>
</tr>
</tbody>
</table>
D. RESEARCH AGENDA

A set of research topics are provided to support the implementation of BruMAP-NCD. Further prioritisation will be carried out using a set of criteria for implementing the agenda. Due to human resource constraints, most if not all, will be done in collaboration with academic or research organisations such as the University of Brunei Darussalam (UBD) and Centre for Strategic Policy Studies (CSPS), Regional and International Partnerships. Dedicated funding and other resources will need to be identified early for the research to be conducted within the timeframe.

FIGURE 1: OVERVIEW OF PROGRAMMATIC INTERVENTIONS OVER THE LIFE COURSE TO PREVENT HPV INFECTION AND CERVICAL CANCER

Population prevalence (not to scale)

9 years 15 years 30 years 45 years 60 years

PRIMARY PREVENTION
Girls 9-13 years
- HPV vaccination

Girls and boys, as appropriate
- Health information and warnings about tobacco use*
- Sexuality education tailored to age & culture
- Condom promotion/provision for those engaged in sexual activity
- Male circumcision

SECONDARY PREVENTION
Women >30 years of age
Screening and treatment as needed
- “Screen and treat” with low cost technology VIA followed by cryotherapy
- HPV testing for high risk HPV types (e.g. types 16, 18 and others)

TERTIARY PREVENTION
All women as needed
Treatment of invasive cancer at any age
- Ablative surgery
- Radiotherapy
- Chemotherapy

* Tobacco use is an additional risk factor for cervical cancer.
How do we create change for better Cancer prevention and control?
Parameters for strategic planning exercise:

- Focus: Comprehensive Cancer Control Plan development
- Linked to a measurable change in your community
HOW DOES CHANGE HAPPEN?
Begin with the END in mind.
Exercise: What change do you want to create?

1. **Specific**
   - Not vague
2. **Measurable**
   - With numbers
3. **Attainable**
   - Possible to achieve
4. **Results-Oriented**
   - Tied to Goals
5. **Time-Bound**
   - Have an endpoint
Thank you for your attention....
